SPECIFICATIONS AND BILL OF QUANTITIES
WITH ENGINEERING ESTIMATE

PROJECT:

GAMBELA PRIMARY HOSPITAL

LOCATION:

GAMBELA, ETHIOPIA

OWNER:

DOCTORS WITH AFRICA- CUAMM

Prepared by:- Solomon Tesfay _____ago-23

Preamble to the Bill of Quantities

1. The Bill of Quantities shall be read in conjunction with the Drawings and Technical Specifications.

- 2. The Bill of Quantities contains the following part Bills and Schedules:
- a. Bill No. 1 Ataye Damaged Block

3. The Quantities given in the Bill of Quantities are estimated and provisional, and are given to provide a common basis for bidding. The estimated contract quantity of each item of works will be set at the time of contract signing. In addition to this the basis of payment will be the actual quantities of work ordered and carried out, as measured by the Contractor and verified by the Engineer and valued at the rates and prices bid in the priced Bill of Quantities, where applicable, and otherwise at such rates and prices as the Engineer may fix within the terms of the Contract

4. The rates and prices bid in the priced Bill of Quantities shall, except insofar as it is otherwise provided under the Contract, include all Constructional Plant, Labor, supervision, materials, erection, maintenance, insurance, profit, taxes, and duties, together with all general risks, liabilities, and obligations set out or implied in the Contract.

5. A rate or price shall be entered against each item in the priced Bill of Quantities, whether quantities are stated or not. The cost of Items against which the Contractor has failed to enter a rate or price shall be deemed to be covered by other rates and prices entered in the Bill of Quantities.

6. The rates in this Bill of quantities shall consider all incidental works required to protect existing structures.

7. Items associated with a priced item necessary for its satisfactory fixing shall be considered as included in

8. The rates given for Provisional Quantities (PQ) will be binding if the client decides to incorporate these

9. The whole cost of complying with the provisions of the Contract shall be included in the Items provided in the priced Bill of Quantities, and where no Items are provided, the cost shall be deemed to be distributed among the rates and prices entered for the related Items of Work.

10. The Overhead & risk and the gross profit for variation orders will be 35%.

11. General directions and descriptions of work and materials are not necessarily repeated nor summarized in

- 12. The method of measurement of completed work for payment shall be in accordance with Standard
- 13. The Bill of Quantities contains items
- a. Supplied and installed by the Prime contractor
- b. Provisional Quantities Supplied and installed by the Prime contractor
- c. Provisional Sum Items supplied by the Client and installed by the Prime Contractor
- d. Provisional Sum Items Supplied and installed by Nominated Sub-contractor

14. Provisional Sums included and so designated in the Bill of Quantities shall be expended in whole or in part at the direction and discretion of the Engineer.

15. The duties and responsibilities of the Prime Contractor for items 13(b), 13(c) and 13 (d) above are deemed to be covered by the Contractor's charge indicated in here. The duties and responsibilities of the Prime Contractor in addition to those indicated in the Bill of Quantities are:-

- a. Handle and store materials at site both for prime contractor, the Client and nominated sub-contractor
- b. Provide utilities like power, water and other necessary utilities for use by the Client and nominated sub-
- c. Provide within the site transport and lifting equipment for all loading and unloading purposes and all

d. Provide scaffolding, ladder, etc as needed

e. Execute any incidental works, like concrete work, earthwork, finishing, patching, and chiseling as required by the Client and nominated sub- contractors.

f. Removal of debris and clean the site at completion

16. Errors will be corrected by the Employer for any arithmetic errors in computation or summation as(a) where there is discrepancy between amounts in figures and in words, the amount in words will govern(b) where there is a discrepancy between the unit rate and the total amount derived from the multiplication of the unit price and the quantity, the unit rate as quoted will govern.

17. Rock is defined as all materials which, in the opinion of the Engineer, require blasting, or the use of metal wedges and sledgehammers, or the use of compressed air drilling for their removal, and which cannot be extracted by ripping with a tractor of at least 150 brake hp with a single, rear-mounted, heavy-duty ripper.

18. A type of bonding agent used for bonding old concrete to newly fresh one should get approval before application and the cost in connection with the bonding old concrete to newly fresh one shall be born by the

19. All provision for sanitary pipe passage, Electrical and Sanitary ducts and provision of sleeves will have to be done during concrete works as per the Electrical and Sanitary drawings and they are deemed to be

20. The Contractor is responsible for the detail assessment of the Site conditions and any measure to be

21. The removal of Surplus excavated material shall be to an appropriate place away from the construction site. The contractor shall also make arrangement to damp this surplus excavated material to the owner place

22. The Contractor shall submit catalogues with full description for Items under all Divisions which include, but are not limited to: Finishing Materials, Electrical, Sanitary fittings & Equipments and shall get approval

23. All Electrical and Sanitary works /installation/ shall be done by experienced staff or specialized subcontractor or personnel who have a minimum of eight years experience with similar works & this has to be approved by the Engineer based on their CVs & educational background and certification and recommendation and/or supervision by suppliers

24. All Electrical and Sanitary works shall be tested & commissioned prior to filling chiseled cavities, installing ceilings, covering vertical & horizontal ducts & back filling trenches. The Contractor shall be fully responsible for all systems

25. The Prime contractor shall submit samples of all finishing materials installed by himself and by nominated sub-contractors for approval by the Engineer and the Employer.

SUMMARY OF PRICES

01. EXCAVATION AND EARTH WORK	Birr	-
02. CONCRETE WORK	Birr	-
03. MASONRY WORKS	Birr	-
04. ROOFING	Birr	-
06. METAL WORKS	Birr	-
07. STEEL WORK	Birr	-
08. WALL AND FLOOR FINISHING	Birr	-
09 . PAINTING	Birr	-
10. SANITARY WORK	Birr	-
11. ELECTRICAL WORK	Birr	-
SERVICE SUM	Birr	-
15% VAT	Birr	-
GRAND TOTAL	Birr	-

Consultant's estimation for the realization of the civil works is 6 months

BILL	OF	OUANTITY	(- Gambela	Primary	Hospital
	U .	QUANTIN	Guillisciu		nospitai

ITEM	DESCRIPTION	UNIT	QUANTITY	RATE	QUANTITY
01	EXCAVATION AND EARTH WORK				
	EXCAVATION WORKS				
	* The contractor is responsible for covering any costs incurred due to damage of utility lines and care shall be taken for all existing utilities that could be covered or exposed to view throughout the project execution period.				
1.1	EXCAVATION				
1.1.1	REMOVAL OF TOP SOIL				
	Removal of Top Soil: The top soil shall be removed to the specified depth (200- 300mm as directed by the Engineer) leaving area clear off any vegetable soil. The removal of top soil shall be measured by the area occupied by the work to be placed on the cleared area. Removal of top soil shall be understood as including the disposal of surplus material or stock piling and wheel spreading of top soil at later stages as directed by the Engineer.	m²	219,64		-
1.1.2	EXCAVATION IN ORDINARY SOIL				
	 * Excavation shall mean the excavation and get out of the soil. Excavation in ordinary soil shall be measured by volume as the net void created by the excavation with deduction made for existing voids. * "Ordinary Soil" shall mean material yielding to ordinary excavation machinery or pick axes. * "Boulder" shall mean isolated volume of hard rock in ordinary soil and soft rock or above ground less than 1/2 cubic meter in volume. 				
1.1.2.1	Bulk Excavation in Ordinary Soil: Bulk excavation to reduce the Natural ground Level to a depth not exceeding 100cm from reduced level.	m³	109,82		-
1.1.2.2	Pit Excavation in ordinary soil: Pit excavation for isolated footing to a depth not exceeding 2000mm from reduced level.	m³	37,50		_
1.2	BACK FILL				
	 * Fill to excavations or to make up level shall be made in suitable material approved by the Engineer and capable of being compacted. Þ Fill shall be placed in successive stages of not exceeding 200mm and watered and compacted to approval by the Engineer. * The compaction achieved in filling shall be measured in accordance with the standard practice. The In situ moisture content and density shall be compared with laboratory test results of modified AASHO T147 performed on samples of the selected material. * The minimum relative compaction to be achieved in the compacted area shall be 95% maximum dry density and the moisture content shall be within the range of 95% dry density. The moisture content of the fill material shall be adjusted as necessary to achieve the required compaction. Any material which after repeated compaction, does not fulfill the requirements, shall be removed and replaced. * The final levels of fill shall be adjusted, graded and prepared to receive bedding to be laid on fill. Fill shall be measured as equal to the net volume of void to be filled and shall be understood as including the stockpiling and haulage of material from location of fill. 				
1.2.1	Selected borrowed fill - Suitable non-expansive well graded soil or granular material with no rock lumps imported from outside and approved by the Engineer. Fill works Is under floor slab and around footing pad as well a around foundation column.	m³	93,95		
1.3	DISPOSAL				

	* All unsuitable and surplus suitable material arising from excavations shall be				
	disposed off when instructed by the Engineer.				
	* Disposal shall be made to tips directed by the Engineer or indicated in the				
	document. In the absence of direction from the Engineer or indication in the				
	documents, it is the contractor's responsibility to identify the appropriate tip				
	and dispose the material.				
	* Disposal shall be understood to include stock piling, loading, transporting,				
	dumping and wheel spreading at tip. Disposal shall be measured as the net				
	volume arising from the void created by the excavation, less excavated				
	material backfill, filled and wheel spread within site or left stockpiled.				
1.3.1	Cartaway surplus excavated material to a place where the administration has				
1.0.1	allotted for disposal. The contractor is responsible for permission from	m ³	101 25		
	relevant authorities.		131,23		_
1.4					
1.4					
1.4.1	HARDCORE AND STONE FILLERS				
	Placed as directed by the Engineer and finished blinded with 20mm crushed				
	praced as directed by the Engineer and misned binded with 20mm crushed				
1.4.1.1	Hardcore under Ground floor slab to a thickness of 25cm and blinded with	m ²	190.65		
	20mm crushed aggregate.		,		-
01	SUB TOTAL EXCA	AVATION	& EARTH W	ORK ETH BIRR	-
02	CONCRETE WORKS				
2.1	Cast in Place Concrete				
	Cast in place concrete is concrete premixed at a batching plant and				
	transported to the work site or concrete whose ingredients are transported to				
	the site and mixed just before casting in place.				
2.1.1	50mm thick C-5 lean concrete with minimum cement content of 150kg/m3				
2.1.1	50mm thick C-5 lean concrete with minimum cement content of 150kg/m3 of concrete under

10	SANITARY INSTALLATION WORKS				
	All fixtures, equipments, pipes & materials which are specified below shall subject to the Engineer's approval, based on Samples, Catalogues and/or Brochures presented by the contractor. Unit Price shall include all the necessary installation accessories and all assistance civil works there to for the proper installation and operation of the sanitary wares, pipe works and any other related sanitary works.				
10,1	SANITARY APPLIANCES INSTALLATION				
10.1.1	Supply and fix <u>High quality</u> Gold Dragon or equivalent brand <u>Hand wash</u> <u>Basin</u> . The fixture shall conform to BS5506-3 or equivalent institution. The mixing faucets, waste drain holes, bottle trap, waste fitting, connecting pieces, fixing, <u>female attakini(60cm long)</u> and supporting elements and all other accessories shall comply with relevant clauses of BS standard or equivalent institution. size: <u>520x420mmx850 mm high</u>	pcs	4,00		-
10,2	WATER SUPPLY SYSTEM				
10.2.2	Supply and install Polypropylene Random Co-polymer resins (PP Type 3 raw material) PPR PN-20 to internal cold water distribution system as shown on the drawing. Complete with all the necessary fittings and accessories. All diameters specified here are internal (Nominal) diameters.				
	a) Dia. 25 mm	ml	25		-
10.2.3	Supply and fix 15mm dia chrome plated brass quarter turn angle valves with chrome plated copper connecting pipe, union nut and chrome plated brass wall flanges, and accessories complete in all respects. The Angle valve should be capable resisting of PN-10 before hand wash basins, water closets and other fixtures. WASTE WATER DRAINAGE SYSTEM	pcs	4		-

	All domestic waste, vent and storm water pipe lines shall be comply to BS 459, BS 4660, BS 5481 as appropriate, using double ring seals and gaskets complying with BS 2394 uPVC, PN-6 pipes and shall be provided with a minimum slope as stated in the drawing. Pipes and necessary fittings shall be standard quality and be free from damage during storage, construction and etc. Unit price shall include all the necessary assistance civil works, such as excavation cartaway, fixing or hanging to walls, beams or slabs. etc., necessary fittings such as bends, Y, etc. Storm water uPVC, PN-6 pipes shall resist the external temperature and the quality shall meet the purpose. Flushing and testing of waste water system. Flushing has to be done to clean the pipe line from debris and silts. All waste water Pipe shall be tested by water pressure of 1.5 meters head for minimum of Four Hours.				
10.3.1	Providing, laying and jointing of internal uPVC PN-6 waste pipes with all uPVC pipe fittings including jointing with solvent cement joints and testing of joints etc. according to where shown on the drawings. Complete with all the necessary fittings. Provide cleaning detail for all waste water riser pipes as per the detail drawing.				
10.3.1.1	Dia. 50 mm, Outer diameter	ml	30		-
10.3.2	Providing, laying and jointing of uPVC PN-6 storm water down pipes				
	with all uPVC pipe fittings including jointing with solvent cement				
	joints and testing of joints etc. according to where shown on				
	the drawings. Complete with all the necessary fittings.				
10.3.2.1	Dia. 110 mm, Outer diameter	ml	35		-
10.3.3	Supply and construct Dia 300mm half concrete Open pipe around the building and pavement. Price shall include Excavation, 100mm thick red ash base and cement mortar mix (1:3) Side joint. The Work includes Connecting to External ditch.	ml	45,00		-
